Author 1<sup>1,\*</sup>, Author 2<sup>2</sup>, etc<sup>3</sup>.

*1 department X, University Y, Country*

*2 department, University, Country*

*3 etc...*

\* Correspondence: email, full address.

## 1. Introduction

The extended abstract has a maximum length of four pages A4, including all figures, tables, and references. Break up your extended abstract in 5 sections:

1. Introduction
2. Materials and Methods
3. Results
4. Discussion and Conclusions
5. References

Your extended abstract will be published 'as is' in the book of abstracts. Your abstract must follow this template accurately to guarantee a consistent book of abstracts. Deviations from the template may result in not including your abstract in the book of abstracts.

We encourage the use of MS-Word and to directly use this template. Off course you can use other word processors, but then you must follow the template accurately. VPH2016 will not provide templates for other word processors.

You submit your abstract as a PDF file. Make sure your PDF file can be opened and printed on Mac and/or Windows systems, as these will be used by the organiser to create the book of abstracts and to upload your abstract to the conference website.

## 2. Materials and Methods

You write on standard A4 pages, with margins 2,5 cm on top, bottom, left, and right. Allow for a header and footer of 1,25 cm from the edge. Keep the header and footer empty and do not add page numbers.

Use the Times New Roman font. For text, use font size 11. Paragraphs must be justified, without indentations. Use single line spacing without any spacing before or after a paragraph. Allow for one empty line between paragraphs.

The section headers are Bold, size 11. The main text start immediately below the section header, so do not add an empty line.

The title must be in Bold, size 14, and centered. The author list is size 11, centered. Add one empty line between the title and the author list. Next follows the affiliation list, which is centered and in italic. Only mention the department, Institution, and Country. Add one empty line between the author list and the affiliations. Finally add the full correspondence details of the corresponding author, so email and full address. Use font size 10, and justified. Allow for one empty line between the affiliation list and the correspondence line. Finally add an empty line after the correspondence information.

## 3. Results

Please add clear and instructive pictures. Your extended abstract will both be available as a PDF file, where the pictures will be in full colour, but it will also be printed, in black and white, in the book of abstracts. So please make sure your pictures also look good in print.

**Figure 1:** Use font size 10 for you figure captions. Captions are also justified. The figure itself should be centered on the page. To reduce space taken by a figure you can create two columns and allow main text to flow left or right from the picture. Do not use a double column format for the overall abstract, only where needed to save space for pictures.

**Table 1:** And likewise for tables.

Please typeset your equations in the same font size as the main text and number them with round brackets. In your main text you make cross-references to your equations without using the round brackets, so Eq. 1. The same applies to figures and tables, so Fig. 1 and Table 1.

$$\sqrt{a^2 + b^2} \tag{1}$$

#### **4. Discussion and Conclusions**

Please ad a list of references in order of appearance in the main text. Use square brackets for your cross referencing in the main text [1] and [2,3]. In the reference list, number the references accordingly. For the reference list, use font size 10. Use a left indentation of 0,25 cm and a hanging indentation at 0,5 cm. First add the reference number, followed by a dot (.), then a tab, and then the reference. We use a short referencing style, see examples in Section 5.
